## (PELLET BAGS, STYROFOAM, SHRINK WRAP)

**EPE-Expanded Polyethylene: Often referred to as “Squishy” or “Spongy” foam.** This foam is labeled as #4 LDPE and is often used as soft packing material for various computer and electronics components. EPE is densified via a hot meet application, and sent to manufacturers where it will be recycled into new products. Currently taking only white/clear –NO COLORS

**EPS-Expanded Polystyrene.** Often mistakenly referred to as “Styrofoam”, this foam is labeled as #6 PS and is used as various coolers, fish boxes, pre-formed packing block and sheet form. EPS is densified onsite via a hot melt application, and sent to manufacturer where is will be recycled into picture frames, building moulding and other framing materials.

**XPS- Extruded Polystyrene** Insulation board manufactured by Owens Corning as Foamular (pink) or Dow as Styrofoam (Blue board). This foam is manufactured to be much denser than EPS, which makes it suitable to be used as wall insulation board for homes and buildings during construction. It is densified onsite via either hot melt or cold compaction and sent to manufactures that recycle the material into new foam products.

**#4 Low Density Polyethylene or LDPE Pellet Fuel Bags are baled on site, and sent to manufacturer where they will be recycled into new products.** Shrink Wrap - #4 Low Density Polyethylene or LDPE stretch wrap or shrink wrap is used by most businesses to wrap product on pallets. It is collected and baled on site and sent to appropriate recyclers who repurpose the material.
